MUAZ B AMIN

SOFTWARE ENGINEERING MASTER'S CANDIDATE | IT & APPLICATION SUPPORT

Petaling Jaya, Selangor, Malaysia | +60 14-723 9860 | 17221221@siswa.um.edu.my | github.com/4orgeTech

PROFILE

IT graduate and Software Engineering master's candidate at the University of Malaya, building practical skills in Python, REST APIs, data analysis, and machine learning. Brings experience in operations supervision, customer support, team coordination, and process improvement. Seeking an entry-level application support, IT support, QA, or junior software role to contribute to real-world technology projects.

TECHNICAL SKILLS

Programming	Python, JavaScript
APIs & Web	FastAPI (currently learning), REST APIs, HTML, CSS
Data & ML	Pandas, NumPy, scikit-learn, Random Forest, data preprocessing
Database	PostgreSQL
Tools	Git, GitHub, Docker, Linux, VS Code

PROFESSIONAL EXPERIENCE

Assistant Manager | ANTE Kitchen & Bar, 1 Utama Shopping Centre

2022–2026

- Managed daily operations, customer service, workforce coordination, inventory, and sales activities.
- Supervised staff scheduling, onboarding, training, and performance.
- Used CRM and POS systems to monitor customer engagement and business performance.
- Supported procurement planning, cost control, and operational improvements.

Intern | Tunas & Partners Consultancy Group

Jul 2018 – Dec 2018

- Supported educational data systems, reporting processes, and data cleaning.
- Documented workflows and collaborated with senior staff on system requirements and information management.

EDUCATION

Master of Software Engineering
University of Malaya | 2023–Present
GPA: 3.70

Bachelor of Information Technology
SEGi University | 2016–2019
CGPA: 3.31 | Dean's List Recognition

RESEARCH PROJECT

Machine Learning-Based Fertilizer Optimization for Paddy Farming

- Developing a machine-learning model to predict paddy yield using fertilizer, soil, and climatic variables.
- Using Python, pandas, NumPy, and scikit-learn for data preparation, feature engineering, and model evaluation.
- Designing a constrained optimization approach to reduce fertilizer costs while maintaining acceptable predicted yield.
